

Senior Corrosion Chemist / Advisor:

Scaled Solutions Ltd is a rapidly expanding independent laboratory based company based in Livingston, which specialises in the selection of chemical additives and treatment packages for the global upstream oil and gas production industry including corrosion inhibitor qualification and materials testing.

The company is internationally recognised in its field and works on a broad range of production chemistry, formation damage and reservoir simulation projects, including a range of R+D projects. A significant proportion of the independent laboratory qualification and consultancy expertise that we provide to our global customer base centres around materials testing and corrosion inhibition.

The company's reputation within its industry for high quality independent laboratory and associated services is growing strongly and with this, the demand for its services from both its local and international client base is expanding. We are currently seeking a Senior Corrosion Chemist/Advisor for this expanding area of the business to join us ideally on a full time basis.

Job Description:-

- Provide expertise to and assume responsibility for the management of the Corrosion Testing Department at Scaled Solutions' Livingston facilities.
- Discuss with and provide advice to a global client base on all aspects of corrosion management, materials selection and specifically chemical (corrosion inhibitor) performance testing and chemical qualification.
- Responsible for the day to day management of a dedicated team of corrosion chemists and scientists.
- Responsible for the safe and efficient operation of the corrosion laboratories including personnel, equipment, projects and budgets.
- Responsible for the delivery of all corrosion and materials testing related client projects.
- Provide corrosion and materials related expertise to current and future multi-disciplinary Joint Venture Projects and New Development Programmes managed by Scaled Solutions.
- Travel is an integral part of this role as Scaled Solutions is a global service provider working in UK, Europe, Middle East, Far East, Australia and North & South America.

Minimum Requirements:-

- BSc in Chemistry, Metallurgy/Materials, Chemical Engineering with a post graduate qualification in Corrosion Science desirable.
- An in-depth knowledge of corrosion inhibition and laboratory techniques for chemical performance testing is essential.
- Substantial experience in the oil and gas (or closely related) sector with considerable knowledge of corrosion inhibitor qualification testing and applications.
- Considerable experience in the use of corrosion prediction software and its use and limitations under oilfield production conditions.
- A working knowledge of relevant oil and gas sector standards relating to materials selection and corrosion management such as ASME, ASTM, API and NACE.
- Excellent interpersonal skills, computer literacy, report writing and presentation skills are an essential requirement of this role.
- A proven track record of management of personnel, projects, and budgets is also essential.

Competitive salary.
